

# Immunizations for Adolescents (IMA-E)-Combo 2

*\*For HEDIS MY 2025, the IMA measure will be reported using only the ECDS method, meaning it will rely on data from electronic health records, claims and other digital sources*

## Description

The percentage of adolescents 13 years of age who had one dose of meningococcal vaccine, one tetanus, diphtheria toxoids and acellular pertussis (Tdap) vaccine, and have completed two doses of the human papillomavirus (HPV) vaccine series by their 13th birthday.

## Measure strategies and tips

- Review missing vaccines with parents.
- Recommend immunizations to parents. Parents are more likely to agree with vaccinations when supported by the provider. Address common misconceptions about vaccinations.
- Train office staff to prep the chart in advance of the visit and identify overdue immunizations.
- Make every office visit count. Take advantage of sick visits for catching up on needed vaccines.
- Review if a vaccine was previously given at another location. Include these on the patients' vaccination record even if your office did not provide the vaccine.
- Recommend the HPV vaccine series the same way you recommend the Tdap and Meningococcal vaccines. Missing HPV vaccines are the primary reason for noncompliance. Schedule the second HPV appointment when giving the first HPV vaccine.

## Measure Codes

Meningococcal immunization	<b>CPT: 90619, 90623, 90733, 90734</b> <b>CVX: 32, 108, 114, 136, 147, 167, 203, 316</b>
Anaphylaxis due to Meningococcal vaccine (disorder)	<b>SNOMED CT: 428301000124106</b>
Tdap vaccine procedure	<b>CPT: 90715; CVX: 115</b>
Anaphylaxis due to Diphtheria, Tetanus or Pertussis vaccine	<b>SNOMED CT: 428291000124105, 428281000124107</b>
Encephalitis due to Diphtheria, Tetanus or Pertussis vaccine	<b>SNOMED CT: 192710009, 192711008, 192712001</b>
HPV immunization	<b>CPT: 90649, 90650, 90651; CVX: 62, 118, 137, 165</b>
Anaphylaxis due to human papillomavirus vaccine (disorder)	<b>SNOMED CT: 428241000124101</b>
